Professional Summary

Senior Java Backend Developer with 6+ years of experience specializing in modernizing legacy enterprise systems into scalable, cloud-native microservices. Strong expertise in Spring Boot, Apache Kafka, and Google Cloud Platform (GCP), with proven success in designing and delivering production-ready, high-throughput systems in banking and enterprise environments. Experienced in transforming EJB-based monolithic applications into Java 17 microservices, reducing technical debt and improving performance, scalability, and deployment efficiency. Proven ability to own the full development lifecycle—from architecture design to production deployment—for fault-tolerant, distributed systems aligned with North American engineering standards.

Technical Skills

- **Programming & Backend:** Java (8–17), Spring Boot, Python
  Microservices Architecture, REST APIs
- **Event-Driven & Messaging**: Apache Kafka
- **Cloud & DevOps**: Google Cloud Platform (GCP), GKE, Docker, Kubernetes, CI/CD: GitHub Actions, Jenkins
- **Frameworks:** Java/J2EE, Spring Boot, JUnit, RESTful Webservices, Microservices, Hibernate
- **Cloud & DevOps:** Google Cloud Platform (GCP), Kubernetes (GKE), Docker, Jenkins, GitHub Actions
- **Architecture & Systems**: Distributed Systems, Event-Driven Architecture, High Availability, Fault Tolerance, System Design, API Design
- **Performance & Optimization**: Redis (Caching), NGINX (Load Balancing)
  Asynchronous Processing, Performance Tuning
- **Application Servers**: Apache TomEE, Apache Tomcat
- **Databases:** Oracle, MySQL, PostgreSQL, MongoDB
- **Engineering Practices**: Agile/Scrum, TDD, Code Reviews
  Secure Coding, Production Monitoring & Logging

Experience

Senior Java Developer

J&M Group Inc (Client: Royal Bank of Canada – RBC), Canada | August 2025 – Present

- Developing enterprise-grade banking applications using Spring Boot within a distributed microservices architecture
- Design and develop scalable microservices for **high-volume financial transaction systems** using Spring Boot
- Build and maintain **event-driven architectures using Apache Kafka**, ensuring reliable asynchronous communication across services
- Handle **high-throughput systems processing large-scale financial data**, ensuring low latency and fault tolerance

- Improve system performance by implementing **Redis-based caching strategies**, reducing response times in critical services
- Lead migration of **80+ CI/CD pipelines from Jenkins to GitHub Actions**, significantly improving deployment efficiency
- Optimize deployment workflows, reducing release time and improving system reliability
- Develop secure REST APIs aligned with banking compliance and security standards
- Collaborate with cross-functional teams to translate business requirements into scalable technical solutions
- Troubleshoot production issues in distributed systems, ensuring high system availability

Career Break – Relocation to Canada

Canada | Oct 2024 – Aug 2025

- Relocated internationally from India to Canada and completed settlement formalities
- Focused on career transition, job search, and aligning skills with North American market requirements
- Continued upskilling in cloud technologies, CI/CD practices, and backend development

Senior Java Developer
Infosys Ltd, Kerala, India | January 2023 - October 2024

- Spearheaded the development of more than 50 RESTful microservices using Spring Boot and Golang, deployed across distributed systems, ensuring system interoperability and scalability.
- Orchestrated the seamless migration of more than 100 microservices from OpenShift to Google Cloud Platform (GCP), yielding an estimated 40% reduction in infrastructure costs.
- Leveraged ORM frameworks such as Hibernate and JPA for robust and efficient data persistence.
- Engineered NGINX-based routing solutions that optimized traffic distribution processes, resulting in a notable enhancement in overall system performance and effectively managing peak load times with minimal latency.
- Utilized Google Kubernetes Engine (GKE) to manage and orchestrate containerized applications, ensuring high availability and scalability across the cloud environment.
- Used a complete annotation-driven approach to develop the application using Spring Boot, and was involved in setting up the Spring Bean profiling.
- Creating, managing, and performing container-based deployments using Docker images containing Middleware and applications together.
- Used Spring Rest Template to use the exposed REST Web Services.
- Developed Java/J2EE code with OOP concepts, and involved in Peer code reviews.
- Developed the application by using Scrum Methodology in an Agile Environment.
- Executed the timely delivery of Java-based applications for multiple high-stakes projects, consistently meeting 100% of project deadlines while upholding rigorous code quality standards reflected in a less than 2% defect rate.
- Designed and implemented asynchronous event-driven architectures using Google Pub/Sub for scalable communication between distributed services.
- Wrote and maintained SQL queries for data manipulation and retrieval, supporting application functionalities.

- Developed secure microservices using Spring Boot and JWT-based authentication to protect REST APIs.

Java Developer
Infosys Ltd, Kerala, India | December 2021 - December 2022

- Engineered over 40 server-side RESTful APIs utilizing SpringBoot and Go, achieving a 99.9% uptime.
- Developed Go proxies as part of the GCP Transformation, contributing to successful release activities and ensuring seamless integration and performance.
- Created shell scripts to automate the compilation, packaging, and deployment of MSA services in Apache TomEE.
- Created API designs using OpenAPI 3.x.
- Developed and deployed SOAP APIs to accommodate legacy system integrations, resulting in a seamless connection for over 15 key applications.
- Developed and maintained documentation for system architecture, configurations, and troubleshooting guides, improving team collaboration and knowledge transfer.
- Conducted comprehensive root cause analyses on production issues, leading to the identification of critical performance bottlenecks; implemented solutions that enhanced system stability by reducing incident response times by 50%.

Java Developer
Coolminds Technologies (P) Ltd, India | July 2019 - November 2021

- Designed and deployed full-stack solutions that improved internal process automation and reduced manual workload by 40%.
- Developed RESTful APIs using Spring Boot and Structs to enable communication between different components of the application and increasing development speed by 25%.
- Developed custom APIs for client web applications, improving data retrieval speeds by 60%.
- Developed unit test cases, ensuring robustness and reliability of the systems.
- Collaborated with cross-functional teams including product managers and QA engineers to gather requirements and deliver high-quality software solutions on schedule.
- Wrote and maintained SQL queries and stored procedures for data manipulation and retrieval, supporting application functionalities.
- Developed secure microservices using Spring Boot and JWT-based authentication to protect REST APIs.

Java Developer
Coolminds Technologies (P) Ltd, India | July 2019 - November 2021

- Collaborated with senior developers to design and implement web application modules using Core Java and Spring MVC, enhancing overall application responsiveness by 20%.
- Assisted in developing RESTful APIs with Spring Boot to facilitate front-end/back-end integration, improving data flow efficiency by 25%.
- Contributed to unit testing using JUnit and Mockito, raising code coverage to eighty-five percent and ensuring early defect detection.
- Participated in daily Scrum ceremonies and code reviews, adopting Agile best practices to streamline feature delivery.

- Documented technical specifications and API endpoints, improving clarity for team members and future development.
- Designed and deployed full-stack solutions that improved internal process automation and reduced manual workload by 40%.

Education

- **Master's Degree in Master of Computer Applications - MCA**
  Saintgits College of Engineering, India | January 2017 - January 2019 | 7.74

- **Bachelor's Degree in Bachelor of Computer Applications - BCA**
  Parumala Mar Gregorious College, India | January 2013 - January 2016 | 6.68

Awards & Honors

- **Infosys Insta Award** | Infosys - September 2023

  Award for significant contribution in trying out the Infosys Migration Tool (IMP) for the migration work.

- **Infosys Insta Award** | Infosys - March 2023

  For playing key developer roles in OpenShift to Anthos Microservices migration.

- **Infosys Insta Award** | Infosys - December 2022

  For playing the key developer role in GCP Transformation Proxy development release activities.

Certifications

- Developing Containerized Applications on Google Cloud | Coursera
- Java FullStack Developer Specialization | Board Infinity
- Infosys Certified Google Cloud Practitioner | Infosys
- Infosys Certified Java SE8 Developer | Infosys
- Infosys Certified Java Programmer | Infosys
- Infosys Certified Javascript Programmer | Infosys
